

NOT IN MY BACK YARD

**Heartworms don't live here.**

Grounded or  **Unfounded?**

**FACT: Although heartworm incidence varies by region of the country, cases of heartworm infection have been diagnosed in all 50 US states.** Certainly the risk is greater in some areas of the country than

others, but no state is risk-free for heartworm infection in dogs or cats.

**BEST STRATEGY: Every pet should be on a 12-month heartworm prevention program regardless of where you live.**

**Protection is priceless.**

Choose year-round heartworm prevention for your pet.
